

Admin Dashboard UI - Assignment

Build a modern Admin Dashboard UI using React. This assignment focuses on layout design, API integration, loading states, and reusable components.

Core Features:

- 1 Sidebar + Layout: Create a responsive sidebar with navigation and a main content area.
- 2 API Integration: Fetch data from a public API and display it in the dashboard.
- 3 Loading States: Show loading indicators while fetching data.
- 4 Reusable Components: Create reusable UI components like cards, tables, and buttons.

Tasks:

- 1 Design a dashboard layout with sidebar and header.
- 2 Implement navigation between pages.
- 3 Fetch and display data from an API (e.g., users or products).
- 4 Show loading spinner while data is loading.
- 5 Create reusable components for cards and lists.

Bonus Tasks:

- 1 Add dark/light theme toggle.
- 2 Add charts or analytics section.
- 3 Make the UI fully responsive.
